

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions, and listings, of claims in the captioned patent application:

1-53. (Cancelled)

54. (Currently Amended) A cochlear implant comprising:

a stimulator unit configured to generate electrical stimulation signals;

an electrode assembly comprising a lead extending from the stimulator unit, and a contiguous elongate member implantable in a recipient's cochlea;

one or more electrodes disposed on or in the elongate member each configured to deliver the electrical stimulation signals to the cochlea; and

an annular collar slidably mounted around the lead such that the lead extends through a lumen in the collar, the collar having a chamber therein configured to receive a bioactive substance and an outlet through which the bioactive substance can pass from the chamber to a target site in the recipient; and

a stop member, disposed on the electrode assembly, configured to prevent the collar from sliding beyond the stop member toward a distal end of the elongate member.

55. (Cancelled)

56. (Previously Presented) The cochlear implant of claim 54, wherein a portion of the lead is configured to be implanted in a middle ear of the recipient, and wherein the collar is dimensioned to slide along a portion of the lead implanted in the middle ear.

57. (Previously Presented) The cochlear implant of claim 54, wherein the collar has a plurality of different diameters along the length of the collar.

58. (Previously Presented) The cochlear implant of claim 54, wherein the chamber is configured to retain the bioactive substance therein for a period of time.

59. (Previously Presented) The cochlear implant of claim 54, further comprising:
a semi-permeable membrane disposed in the outlet and configured to leach the bioactive substance from the chamber to the target site.
60. (Previously Presented) The cochlear implant of claim 54, wherein the chamber is annular and surrounds the lumen of the collar.
61. (Previously Presented) The cochlear implant of claim 60, wherein the outlet is annular.
62. (Previously Presented) The cochlear implant of claim 54, wherein the collar further comprises:
an inlet in fluid communication with the chamber.
63. (Previously Presented) The cochlear implant of claim 62, wherein the inlet is disposed in a proximal end of the collar, and the outlet is disposed in a distal end of the collar.
64. (Previously Presented) The cochlear implant of claim 62, wherein the chamber is configured to pass the bioactive substance from the inlet to the outlet.
65. (Previously Presented) The cochlear implant of claim 64, wherein the chamber is a pipe extending through the collar from the inlet to the outlet.
66. (Withdrawn) The cochlear implant of claim 62, further comprising:
a reservoir in fluid communication with the inlet and configured to retain the bioactive substance.
67. (Withdrawn) The cochlear implant of claim 66, wherein the reservoir is positionable external to the recipient.
68. (Withdrawn) The cochlear implant of claim 66, wherein the reservoir is positionable within the recipient.

69. (Withdrawn) The cochlear implant of claim 66, further comprising:
 a catheter extending from the reservoir to the inlet; and
 a pump configured to transfer the bioactive substance from the reservoir into the chamber via the catheter.
70. (Currently Amended) An implantable tissue stimulating device comprising:
 an electrode assembly comprising a lead and an elongate member having its proximal end contiguous with a distal end of the lead, and having one or more electrodes disposed on or in the elongate member; and
 a slider means for delivery of a bioactive substance delivery eollar slidably mounted on around the lead such the lead extends through the slider means a lumen in the eollar, the slider means eollar ~~having a chamber therein~~ configured to receive a bioactive substance and ~~deliver the bioactive substance to an outlet through which the bioactive substance can pass from the chamber to a target site in the recipient.~~
71. (Currently Amended) The device of claim 70, further comprising:
 a stop member, disposed on the electrode assembly, configured to prevent the slider means eollar from sliding beyond the stop member toward a distal end of the elongate member.
72. (Currently Amended) The device of claim 70, wherein a portion of the lead is configured to be implanted in a middle ear of the recipient, and wherein the slider means eollar is dimensioned to slide along a portion of the lead implanted in the middle ear.
73. (Currently Amended) The device of claim 70, wherein the slider means eollar has a plurality of different diameters along the length of the slider means eollar.
74. (Currently Amended) The cochlear implant of claim 70, wherein the slider means includes a chamber is configured to receive a bioactive substance and configured to retain the bioactive substance therein for a period of time.

75. (Currently Amended) The cochlear implant of ~~claim 70~~ claim 74, wherein the chamber is annular and surrounds a the lumen of the slider means through which the electrical lead passes eollar.

76. (Cancelled)

77. (Currently Amended) The device of ~~claim 70~~, claim 74, wherein the slider means further comprises further comprising:

an outlet in fluid communication with the chamber; and

a semi-permeable membrane disposed in the outlet and configured to leach the bioactive substance from the chamber to the target site.

78. (Currently Amended) The device of ~~claim 70~~ claim 74, wherein the slider means eollar further comprises:

an inlet in fluid communication with the chamber.

79. (Currently Amended) The cochlear implant of claim 78, wherein the slider means further comprises:

an outlet in fluid communication with the chamber,

wherein the chamber is configured to pass the bioactive substance from the inlet to the outlet.

80. (Currently Amended) The cochlear implant of claim 78, wherein the inlet is disposed in a proximal end of the slider means eollar, and the outlet is disposed in a distal end of the slider means eollar.

81. (Currently Amended) The cochlear implant of ~~claim 78~~ claim 80, wherein the chamber is a pipe extending through the slider means eollar from the inlet to the outlet.

82. (Cancelled)

83. (New) The device of claim 70, wherein:
the device is a cochlear implant.

84. (New) A cochlear implant comprising:
a stimulator unit configured to generate electrical stimulation signals;
an electrode assembly comprising a lead extending from the stimulator unit, and a
contiguous elongate member implantable in a recipient's cochlea;
one or more electrodes disposed on or in the elongate member each configured to
deliver the electrical stimulation signals to the cochlea; and
an annular collar slidably mounted around the lead such that the lead extends through
a lumen in the collar, the collar having a non-porous cavity therein configured to receive a
bioactive substance and an outlet located on an exterior face of the collar through which the
bioactive substance can pass from the cavity to a target site in the recipient,
wherein the outlet faces the electrode assembly and forms a boundary of the cavity.

85. (New) The cochlear implant of claim 84, wherein the outlet comprises a valve
configured to allow the bioactive substance contained in the cavity to exit the cavity and at
least substantially prevent fluid flow from external the cavity into the cavity.
